

CLIMATOLOGICAL DATA FOR MARCH, 1911.**DISTRICT NO. 10, GREAT BASIN.**

ALFRED H. THIESSEN, District Editor.

GENERAL CLIMATOLOGICAL CONDITIONS.

The weather over the Great Basin during March, 1911, was on the whole very pleasant, and favorable for the rapid advancement of all vegetation and for progress in farming operations.

While the temperature of the present March was above normal, it was about 5° lower than that of the same month in 1910. The precipitation, while not quite as much as the average, was much more than that of March, 1910.

TEMPERATURE.

The mean temperature for the entire district for March was 38.8° , which is about 2.6° above normal. The mean temperature at the various stations ranged from 24.2° at Truckee, in eastern California, to 61.3° at Jean, in southern Nevada.

The highest mean temperature occurred in central and southern Nevada and in the sheltered valleys of the Utah area; the lowest in the Oregon, Idaho, Wyoming and portions of the California areas. The greatest plus departures occurred in Nevada. There were only a few stations where minus departures occurred, and as a rule they were in the eastern and northeastern parts of the district.

The first part of the month was cold over the entire district, temperatures below zero being reported in the Wyoming area, and the lowest temperatures of the month were, as a rule, recorded on the 1st and 2d. After the 9th warm weather set in, which continued until the 12th, when a decided fall occurred and zero temperatures were again recorded in the Wyoming area. This cold snap lasted until about the 20th. The last cool period of the month extended generally from the 26th to the 29th, after which the warmest weather of the month occurred.

The lowest temperature for the district was -14° at Border, Wyo., on the 2d. Other low temperatures were

-12° at Cokeville, Wyo., on the 2d; -8° at Paris, Idaho, on the 16th; and -7° at Christmas Lake, Oreg., on the 1st. No temperatures of zero or lower were reported in the Utah, Nevada, or California areas during this month.

The highest temperature for the district was 85° at Jean, Nev., on the 28th. Other high temperatures were 84° at Iosepa, Utah; 79° at Burns, Oreg.; and 81° at Fernley, Nev., all on the 31st.

PRECIPITATION.

The precipitation for the district averaged slightly below normal, and was very unevenly distributed. The largest amounts fell in the vicinity of Lake Tahoe, in the Nevada and California areas, 10.04 inches being reported from Deer Park, Cal., and good amounts fell at stations on the western slope of the Wasatch Mountains, in the Utah area. The least amounts fell in the Oregon and in the northeastern part of the Nevada and northwestern part of the Utah areas, where all stations reported amounts below normal.

There were three rainy periods, 1st-4th, 8th-11th, and 20th-26th. These periods are recognized in all parts of the district except in the Lake Tahoe region, where precipitation occurred continuously from the 1st to the 10th. The largest amounts fell in the first part of the month, and as stated above the largest monthly amount was 10.04 inches at Deer Park, Cal., while the next largest was 9.21 inches at McKinney, Cal., which station also reported the largest 24-hour amount, 2.98 inches, on the 7th. After the 11th the weather was fair except for light precipitation which occurred from the 20th to the 25th.

The larger part of the precipitation occurred as rain in the valleys and as snow in the mountains. The snow was not generally heavy, but while it is yet early to correctly forecast how long the supply will last, it is thought that there will be sufficient for all needs.

TABLE 1.—Climatological data for March, 1911. District No. 10, Great Basin.

† Also on other dates.

‡ Separate dates of falls not recorded.

§ Data are from standard instruments not supplied by the U. S. Weather Bureau.

|| Instruments are read in the morning; the maximum temperature then read is charged to the preceding day, on which it almost always occurs.

Estimate by observer.

|| Precipitation for the 24 hours ending on the morning when it is measured.

T Precipitation is less than 0.01 inch rain or melted snow.
